1. AI Interview System

- Conversational AI interviewer (British-style warm tone)
- Context-aware follow-up questions
- Text & audio input support
- Automatic life stage detection
- Real-time progress tracking (9 phases)

2. Life Phase Management

- 9 life phases with curated question banks
- Auto-categorization of memories
- Smart phase switching with intent detection
- Phase completion with intelligent suggestions
- Quick phase selection (number 1-9 or name)

3. Question Management

- Core question tracking (separate from followups)
- Skip functionality with "No problem! Let's move on."
- Unanswered question reminders
- Random compliments for engagement (6 variations)
- Clean question storage with display text for UI

4. Photo Memory Integration

- AI-powered photo analysis and Question generation
- Automatic life stage detection from context
- Photo follow-up questions
- S3 storage with presigned URLs

5. Story Generation

- 6 narrative styles (conversational, literary, formal, reflective, light-hearted, concise)
- Chapter-by-chapter or full story compilation
- Photo captions naturally woven into text

6. Memory Storage (MongoDB)

- Category-wise memory grouping

7. Progress Tracking

- Core question-based calculation

- Phase-wise & overall progress percentage
- Gap detection for incomplete phases

8. Audio Support

- Whisper API transcription (gpt-4o-mini-transcribe)
- Multiple audio formats (WAV, MP3, MP4, WebM, M4A)
- Audio input for interviews & photo answers

9. Phase Complete Handling

- Persistent phase complete messages
- Smart suggestions for incomplete phases
- All phases complete detection
- User-friendly hint messages

10. Depth Scoring

- AI-powered response depth analysis
- 3-level categorization (Minimal, Moderate, Deep)
- Detailed breakdown tracking

12. User Experience

- Contextual hint messages
- Welcome back reminders
- Phase suggestions after completion
- Skip confirmations
- Compliment variety for natural conversation
